Testing Policy for Docks

TripleParity

Contents

1 Testing Process

When a commit is made to the 'docks-ui' repository on GitHub two processes are started:

- Travis CI Builds the repository
- Docker Hub builds the repository and creates a Docker Image that can be deployed in production

1.1 Travis CI

The history of test reports for Travis CI can be viewed at https://travis-ci.org/TripleParity/docks-ui/branches. If the build was not successful it will be marked as 'failed'

1.2 Docker Hub

The history of builds for Docker Hub can be viewed at https://hub.docker.com/r/tripleparity/docks-ui/builds/
